

Meet Soni

SENIOR DEVOPS ENGINEER | PLATFORM ENGINEER | CLOUD SOLUTION ARCHITECT | SITE RELIABILITY ENGINEER

✉ meetsoni519@gmail.com | [in linkedin.com/in/meets0ni](https://www.linkedin.com/in/meets0ni) | github.com/Meet-S0ni

Senior DevOps Engineer with 4.5+ years building Kubernetes platforms, CI/CD, GitOps, Terraform IaC, and observability across AWS, Azure, and GCP for regulated fintech, public-sector, and e-commerce systems. On-boarded 25+ services onto zero-to-production CI/CD, cut AWS spend 70%, shipped LLM-powered RCA automation, and built platform tooling in Go, Python, and Shell.

PROFESSIONAL EXPERIENCE

DevOps Engineer | CygnetOne

Apr 2025 – Present

ABSLMF — Backend Transformation, Azure fintech platform modernization

- Built Azure AKS delivery foundations for a 30-member backend transformation program, onboarding 25+ services spanning 15+ repositories with Helm, ACR, GitHub Packages, and build-once promote-many release tagging through Dev, UAT, and Prod.
- Engineered GitHub Actions pipelines with reusable workflows, composite actions, SonarQube, Trivy, Fortify, Vault-backed secrets, and environment-protected deployments, reducing per-service CI/CD setup time from 10+ hours to 3-4 hours while strengthening auditability for a regulated financial client.
- Standardized deployment architecture by introducing shared base images, a central Helm chart, branch protections, CODEOWNERS, and commit-linked image labels, enabling one workflow change to roll out SentinelOne to every service without touching each pipeline individually.
- Replaced AGIC with NGINX Ingress after validating Azure CNI reconciliation latency with Azure support, cutting rolling updates from about 40 minutes to under a minute, and diagnosed a Palo Alto NAT allowed list gap blocking Azure Service Bus AMQP traffic.
- Built a self-initiated Go-based Central Swagger and ReDoc aggregator refreshing API specs from 25+ services every 2 hours, accelerating frontend integration and QA test cycles.

GSM Outdoors — AI-assisted incident response and progressive delivery

- Implemented zero-downtime Argo Rollouts blue-green deployments and Kustomize manifests, then productionized LLM-powered RCA by routing Grafana alerts through n8n into AWS Bedrock and Confluence, giving the SRE team faster incident diagnosis at about \$20 per month in LLM cost.

UnyBrands — GCP GitOps platform for e-commerce systems

- Provisioned GCP stage and production foundations with Terraform across GKE Autopilot, Cloud SQL, GCS, Pub/Sub, Composer, Vertex AI, KMS, VPC, and NAT, converting Argo CD to an App-of-Apps GitOps model and enforcing GitHub Actions PR test gates for a trunk-based monorepo.

DevOps Engineer | Webclues Infotech

Aug 2024 – Apr 2025

Zizle — AWS platform for a Web3 social and commerce product

- Owned solo DevOps for Zizle on AWS, evolving a limited EKS and Jenkins setup with 2 deployed services into a scalable delivery platform for 20+ services using EKS, ECR, CloudFront, S3, Karpenter, and on-demand GPU Jenkins agents backed by a custom AMI and autoscaling group.
- Built Jenkins CI/CD and access controls with Matrix Authorization, team-scoped folders, secure environment-file handling, and revoked direct runner access, improving release governance while still enabling developer access through in-cluster Adminer and Redis Insight.
- Provisioned reusable Terraform modules for EKS, ECR, Karpenter, Aurora, ElastiCache, Kafka, S3, Istio, and Kubernetes Gateway API, then migrated traffic management from NGINX Ingress to Gateway API and Istio subsets so internal teams could develop `/v2` and `/v3` safely alongside the client's stable release.
- Automated FinOps reporting with a Python daily billing job to Slack and reduced AWS spend 70%, from about \$10K per month to \$3K, by replacing MSK in Dev and UAT with Helm-based Kafka, downsizing MongoDB Atlas from M80 to M20 with autoscaling, and right-sizing Aurora and ElastiCache.
- Strengthened observability and incident response with Prometheus, Grafana, Loki, CPU and memory alerting, and CloudTrail-led forensics that identified a compromised Tech Lead AWS account behind repeated SES outages, enabling fast IAM containment and AWS Support recovery.

511nj / DFE — Azure platform for public traveler information and analytics

- Built Azure DevOps CI and release pipelines for 511nj and DFE, containerizing services into ACR and standardizing deployments in Dev, UAT, Demo, Prod, and DR for a 24x7 public-facing transportation platform.
- Provisioned and managed AKS infrastructure with Terraform while supporting a migration from monolithic systems to 50+ cloud microservices, including HA patterns with TimescaleDB, PostgreSQL, CrunchyDB, Kafka, Trino, PgBouncer, and Mailcow-backed alert delivery.
- Automated cluster start, stop, scaling, runner cleanup, ACR cleanup, and backup workflows with Shell scripts and Airflow DAGs, reducing manual maintenance effort by about 20 hours per week in non-production environments.
- Implemented observability with Prometheus, Grafana, Loki, StatsD, and custom alerting for pod restarts, CrashLoopBackOff, OOMKill, CPU, memory, and PVC usage, and also stood up Zabbix on Hyper-V for legacy Windows infrastructure during the platform transition.
- Recovered PostgreSQL after an accidental WAL PVC deletion with zero data loss and reduced Azure spend by about \$1K per month, roughly 20%, through usage analysis, request and limit right-sizing, pod-affinity tuning, and node-pool optimization.

Award: Ultimate Team Award

DevOps Intern | YoInsights

Sep 2021 – Feb 2022

- Deployed WordPress workloads across Linux, Docker, Docker Compose, and Kubernetes, configured kubeadm-based clusters on VMs and EC2, and managed Secrets, ConfigMaps, ingress, and StatefulSet-based database services.

TECHNICAL SKILLS

Cloud & Platforms: AWS, Azure, GCP, Kubernetes, AKS, EKS, GKE Autopilot, Docker, Helm, Kustomize, ArgoCD, Argo Rollouts

CI/CD & Infrastructure as Code (IaC): Terraform, Ansible, GitHub Actions, Jenkins, Azure DevOps, Azure Artifacts, Nexus, GitHub Packages, Git

Observability: Prometheus, Grafana, Loki, ELK, AppDynamics, Zabbix, PagerDuty

Security & Networking: SonarQube, Trivy, Fortify, SentinelOne, Vault, RBAC, IAM, Istio, Gateway API, NGINX Ingress, Service Bus, CloudTrail

Languages & Data: Go, Python, Shell, JavaScript, Kafka, Trino, Airflow, Redis, n8n, LLM Integration (AWS Bedrock, Azure AI Foundry)

Practices: GitOps, DevSecOps, AIOps, SRE, FinOps, Containerization, Cost Optimization, Incident Response, High Availability, Disaster Recovery

CERTIFICATIONS

AWS Architecting Knowledge badge

AWS Amazon EKS Knowledge badge

Azure Kubernetes Service

Claude Code 101

EDUCATION

Bachelor of Engineering (Mechanical Engineering) | Gujarat Technological University

Aug 2017 – May 2021

CGPA: 8.48
